DETAILED ACTION

Double Patenting

1. The terminal disclaimers filed on November 11, 2004 have been accepted. Thus the double patenting rejections set forth in the Office Action mailed June 10, 2004 have been overcome.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance. Independent claims 13, 36, and 43 are allowed because the prior art of record fails to teach or fairly suggest an apparatus, or means for, scanning the surface of a specimen, using a scanning electron microscope comprising; a deflection unit operative to scan the surface of the specimen by bending the particle beam at an angle relative to the orientation of the specimen, such that the particle beam traverses an angle that is not parallel or perpendicular to the orientation of the specimen, in combination with the other recited limitations in the claims. Claims 14-24 and 37-42 are allowed by virtue of their dependence on claims 13 and 36, respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Winkler et al. (2004/0195522) teaches the well-known aspect of electron beam imaging wherein the angle of incidence between the imaged object and the imaging beam are changed via tilting of the beam or imaged object. (See paragraph 26 for example) This is teaching is not equivalent to the instant invention, wherein as taught on page 7, lines 1-30, the particle beam traverses an angle that is not parallel or perpendicular to the orientation of the specimen.
